

Training Management System - Preparation Guide

1. Install Required Tools

- Install Node.js (LTS).
- Install Git.
- Install PostgreSQL.
- Install NestJS CLI globally.
- Command: `npm install -g @nestjs/cli`
- Verify installation: `nest --version`

2. Create Project Structure

- Create root folder: Training management system
- Planned structure:
- Training management system/
 - ■■■■ tm_backend/
 - ■■■■ tm_frontend/ (later)

3. Create NestJS Backend

- Command: `nest new tm_backend`
- Choose npm when prompted.
- Navigate to backend: `cd tm_backend`
- Run project: `npm run start:dev`
- Verify: `http://localhost:3000`

4. Configure Git Strategy

- Use one Git repository for the entire solution.
- Remove any nested .git repositories.
- Final structure:
- Training management system/
 - ■■■■ .git
 - ■■■■ .gitignore
 - ■■■■ tm_backend/

5. Initialize Git

- Navigate to project root.
- Command: `git init`

- Command: `git add .`
- Command: `git commit -m "Initial project setup with NestJS backend"`

6. Connect GitHub

- Create GitHub repository: training-management-system
- Command: `git branch -M main`
- Command: `git remote add origin`
- Command: `git push -u origin main`

7. Install Prisma

- Navigate to backend: `cd tm_backend`
- Command: `npm install prisma --save-dev`
- Command: `npm install @prisma/client`

8. Initialize Prisma

- Command: `npx prisma init`
- Generated: `prisma/schema.prisma`
- Generated: `prisma.config.ts`
- Generated: `.env`
- Do NOT create migrations yet.
- Complete database design first.

9. Current Status

- NestJS backend created.
- Git configured.
- GitHub connected.
- Prisma installed.
- Prisma initialized.
- Ready for PostgreSQL database design.
